

• PROMPT AUGMENTATION · VIRTUAL TEAM BUILDER

~~Erase~~ the complexity. Keep the effect.

Subscribe to an expert's AI workflow and upgrade your own AI to their level — and one step further, **build a virtual expert team** on top of your existing AI accounts.

복잡함은 지우고, 효과만 남깁니다.

THE PROBLEM

Same AI, **completely different results.**

A senior engineer at Toss and a beginner can chase the same goal with ChatGPT, and the output gap is enormous. Not because the AI is different — **the prompts are.**

What an expert chooses to ask is an asset in itself. Right now, that asset lives nowhere.

SOLUTION

A prompt- augmentation layer on top of your AI.

We don't replace the AI. We rewrite the user's plain question into an expert-grade prompt using a subscribed Creator's memory — then send it through the user's own AI account.

The API bill stays with the user. efface only owns the memory and the transformation.

```
// beginner's prompt
"write some ad copy"

// after efface
+ [subscribed copywriter memory applied]
+ target · tone · problem · promise framing
+ 3 headline candidates + rationale

→ your AI (Claude / GPT / Gemini)
```

HOW IT WORKS

Ask as you always do. efface rewrites it behind the scenes.

01

Connect your AI

Link your existing Claude · ChatGPT · Gemini account.

02

Subscribe to Creators

Subscribe to one or several expert memories.

03

Ask naturally

No need to craft long, careful prompts yourself.

04

efface rewrites it

Your question is rewritten in the experts' style, using their memory.

05

Sent to your AI

The augmented prompt goes through your own AI account
→ results come back.

06

Unsubscribe = off

Cancel a subscription and the transformation stops immediately.

PERSONAS

Two kinds of users meet here.

CREATOR · THE EXPERT

Packages a way of thinking.

Turns their domain knowledge, inquiry patterns and decision frames into a memory. The package is built from a simple AI interview, and they choose whether the rewrite is shown to users.

- BUILD MEMORY · OPEN / CLOSED MODE · REVENUE SHARE

SUBSCRIBER · THE USER

Upgrades their AI to expert level.

Keeps using their existing AI account. Subscribes to one Creator or N Creators at once and asks as usual.

- BRING-YOUR-OWN AI · SINGLE / MULTI · EXPERT-GRADE OUTPUT

MULTI-SUBSCRIPTION – THE VIRTUAL TEAM BUILDER

Don't subscribe to one expert. Subscribe to a whole team.

Run multiple Creators at once and combine engineering, product and design under one AI. Even a solo operator can work alongside a virtual senior team.

/DEV

Creator A — Senior engineer, Toss

"How should I build this feature?" → requirements / constraints / candidate architectures / explicit trade-offs.

```
// auto-applied pattern
- surface edge cases first
- spell out cost / latency / complexity
```

/PM

Creator B — Product manager, Coupang

"Build me this feature" → user / problem / hypothesis / metric / priority, separated out.

```
// auto-applied pattern
- ask "why now" first
- state what's out of scope
```

/DESIGN

Creator C — Designer, Musinsa

"Design this screen" → visual hierarchy / density / state branches / accessibility, all at once.

```
// auto-applied pattern
- lead with the single most important thing
- design empty / error / loading too
```

The fastest way to borrow another discipline's perspective. **Solo founders, side projects, small teams** feel it hardest.

MULTI-SUBSCRIPTION – THREE MODES

Run the virtual team differently depending on the moment.

MODE A · AUTO ROUTING

Auto routing

Classify the question and route it to the most relevant Creator memory.

"improve this screen's UX" → **Designer**

"how should I model this DB" → **Engineer**

"what's the priority here" → **PM**

MODE B · UNIFIED

Unified rewrite

Synthesize every subscribed memory into a single prompt that holds every angle.

"I want to build an app"

↓

[engineering + product + design combined]

↓

"considering stack, MVP scope, core UX flows, user validation..."

MODE C · MULTI-ANSWER

Multi-answer

Return one answer per Creator, side-by-side, for the same question.

Same question

↓

Engineer perspective

PM perspective

Designer perspective

• HANDLING CREATOR CONFLICTS

Engineer says "use React", PM says "use no-code" — when Creators disagree, we **show both and let the user decide.**

THE MEMORY PACKAGE

An expert's mind, compressed into five layers.

How it's built — an AI interviews the Creator and assembles the package automatically. The Creator just talks.

01 ·
Persona

Persona
Role, voice, values. The identity the AI speaks from.

02 ·
Domain

Domain knowledge
Core concepts, tacit knowledge and the recurring problems of the field.

03 ·
Mindset

Mindset
Decision frames, trade-off criteria, heuristics earned from real failure.

04 ·
Inquiry
★

Inquiry pattern — the heart of the product
What you ask, and how, decides the answer. This is the layer efface rewrites against.

05 ·
Rules

Response rules
How specific kinds of questions should be answered.

THE REAL CORE

So experts can trust us with their memory — filtering.

A Creator's memory will always carry information that can't leak. Filtering it out cleanly is what efface is really selling.

• PII · TRADE SECRETS · THIRD-PARTY INFO · CREDENTIALS · NDA

L1 ·
Auto

AI auto-detection & masking

Sensitive spans are recognized in real time and replaced with placeholders.

L2 ·
Creator

Creator review UI

The Creator sees exactly what would be exposed and approves it.

L3 ·
Platform

Manual platform review

High-risk verticals (e.g. licensed professionals) get a final human check. Only approved memories ship.

MOAT

Anyone can build a rewriter. Trust and orchestration — not so much.

The moat isn't a transformation algorithm. It's **an environment experts trust enough to deposit their memory in**, and a unified-response layer that orchestrates multiple experts.

01 Filtering earns trust

02 Experts deposit memory safely

03 Quality memory accumulates

04 Subscribers grow · multi-subscription lifts ARPU

05 More experts join → flywheel

REWRITE DISCLOSURE — CREATOR'S CHOICE

How much of the trick to show — the Creator decides.

OPEN MODE

Transparent "here's what we changed"

Before/after is shown. Users learn prompt craft naturally, and Creators can lean into the educational angle.

- LEARNING · TRUST · GREAT FOR BEGINNERS

CLOSED MODE

Result-only

The rewrite is hidden. The mode prioritizes Creator IP — keeping the know-how from leaking.

- IP PROTECTION · HIGH-VALUE MEMORY · PROFESSIONALS

BUSINESS MODEL

A marketplace that runs without bearing the AI bill.

SUBSCRIBER · USER

Monthly subscription per Creator. **Multi-subscription** naturally lifts ARPU.

PLATFORM · EFFACE

Runs on a **20–30% take rate**.

CREATOR · EXPERT

Monthly payout based on subscriber count — passive income structure.

AI API COST

The user's own AI account is used — the platform doesn't carry token cost. Variable cost stays near zero.

BUNDLES

Curated **team packages** (e.g. "Toss-style team bundle") sold as ready-made combos.

DIFFERENTIATION

Existing AI services vs efface.

EXISTING AI SERVICES

- Built-in memory only serves the one person who owns it
- Service hosts the AI call — bears the token cost
- Prompt quality stays bottlenecked by the user
- Single-perspective answers
- No channel to share expert know-how

EFFACE

- **Subscribe to expert memory** — borrow someone else's thinking
- **Bring-your-own AI account** — no platform cost
- **Automatic expert-style rewrite**
- **Virtual-team answers** from multi-subscription
- **Creator ↔ Subscriber ecosystem**

WHAT'S NEXT

Once the core lands, four ways to expand.

01 ·
B2B

Senior → new-hire knowledge transfer

Capture in-house seniors' know-how as memory and pass it down. Hiring · onboarding · training markets.

02 ·
Vertical

Licensed verticals

Doctors, lawyers, accountants — license-gated domains where regulation makes filtering trust the entry barrier itself.

03 ·
Market

Memory marketplace

Free and paid memory exchange — one-off packages from Creators, internal memories licensed by companies.

04 ·
Team

Curated team packages

Productize proven expert combinations — buy a "[Brand]-style team bundle" off the shelf.

IN ONE SENTENCE

efface safely transports **how an expert thinks** — and bundles experts into **a virtual team**.

• THANK YOU

~~Erase~~ the complexity. Keep the effect.

efface is just getting started. Interest, feedback, or joining the team — all welcome.
